MEMORANDUM FOR THE RECORD

SUBJECT: Records Review, Edgewood Arsenal, Maryland

A review of records holdings at Edgewood Arsenal was conducted to identify, collect and arrange for necessary declassification of all documentation related to human radiation experiments. The review was conducted on Chemical & Biological Defense Command (CBDCOM) records at the CBDCOM Historical Office and Technical Library, and CBDCOM and Medical Research Institute for Chemical Defense (MRICD) records at the Edgewood Area Records Holding Area (EA/RHA).

The RECC personnel involved in the records review were the following:

COL Claud Bailey, Jr., Deputy Director, RECC
Ellen Ziegler, Research Manager
Dave Bouve, Records and Information Systems Manager
Darryl Aaron
Tom Acri, Jr.
Tammy-jean Asencio
Shelley Mennella
Brian Thompson

Tab A provides specific technical information about the search. Tab B provides a list of Points of Contact for the records search at Edgewood Area. Tabs C - I contain the detailed results of the search.

Col. Bailey
Rosemary Gordon
Ellen Ziegler

Tab A

Report of Research Trip to Edgewood Area, Aberdeen Proving Ground, MD

Record holding areas examined by DoD RECC staff:

A. Office of the Command Historian, Corporate Information Office, Chemical & Biological Defense Command (CBDCOM)

Main Room:

- 18 Filing Cabinets containing approximately 225 linear feet of records.
- Approximately 100 linear feet of materials on bookcase shelves.

See Tab C for a listing of all files identified in this record holding area.

Higher Command Room:

- 36 Filing Cabinets containing approximately 445 linear feet of unclassified and previously declassified records.

See Tab D for a listing of all files identified in this record holding area.

Edgewood Room:

- 29 Filing Cabinets containing approximately 445 linear feet of unclassified and previously declassified records.

See Tab E for a listing of all files identified in this records holding area.

Classified Records Room:

- 18 safes containing approximately 216 linear feet of classified (S-RD and below) records.

See Tab F for a listing of all files identified in this records holding area.

B. CBDCOM Technical Library, Corporate Information Office, CBDCOM

An estimated 95% of the Library's holdings are accessible through the Defense Technical Information Center (DTIC). In early 1994 DTIC completed a search of its holdings for documents related to HRE. Because the CBDCOM Libraries holdings were for the most part searched as a result of this earlier search, an on-line search of the Library was not conducted in order to avoid duplication of actions already completed by other DoD entities. Effort was

focused on reviewing the collections that were not accessible through DTIC. RECC researchers reviewed two specific segments of the Library's holdings: bibliographies and project reports.

1. In response to the initial Departmental instruction to review all repositories for records related to human radiation experiments, the staff reviewed two bibliographies of radiological related documents:

<u>DTIC #</u>	<u>Title</u>
AD 845656	Bibliography, with Abstracts, of Reports of US Army Nuclear Defense Laboratory, June 1965 to July 1968, dated December 1968
AD 366621	Bibliography, with Abstracts, of Reports of US Army Nuclear Defense Laboratory, October 1961 to June 1965, dated October 1965

Prior to the arrival of the RECC staff, the Library staff cross-referenced the bibliographies listings with the Libraries holdings. Approximately 12 linear feet of technical reports were identified. All matches were withdrawn and reviewed for HRE-related material. RECC researchers reviewed these documents and identified X records as relevant to the HRE search.

2. The CBDCOM Technical Library possesses a collection of project reports for various studies conducted under contract to the Federal Government (these records are referred to as the ETF-760 series). This collection measures approximately 20 linear feet of records. Mixed in with these records were several documents related to atmospheric nuclear weapons tests.

See Tab G for an unclassified listing of all ETF-760 series records identified at the CBDCOM Technical Library.

C. Edgewood Area Records Holding Area (EA/RHA)

Edgewood Area maintains a large records holding area. The RHA is responsible for maintaining records for all base activities. The EA/RHA contains approximately 9,000 boxes.

After discussions with records management and individuals identified as human radiation experiment points of contact, two specific activities were targeted by RECC Researchers; accessioned records from CBDCOM and the Medical Research Institute for Chemical Defense (MRICD). Transmittal forms (SF-135s) for accessioned records were reviewed. Ten accessions of unclassified CBDCOM records and one classified and one unclassified accession from MRICD were reviewed.

See Tab H for a listing of all records identified at the EA/RHA classified records vault.

See Tab I for a listing of all records identified at the EA/RHA unclassified records warehouse.
